To Whom It May Concern

It is with great pleasure that we recommend Mr. Kleon Karapas, who completed his internship at our organization from 14 July 2025 to 30 October 2025. During this period, he was assigned to the “AI for Fair Transition” Project, reporting directly to the Project Manager. The project designed and developed an AI-based platform offering to the European Commission automated information retrieval and analysis and an integrated classification and overview of the fair transition policy landscape across Member States.

Although this was his first formal professional experience, Kleon managed to distinguish himself from the very first day as a remarkably mature, cooperative, and self-directed professional. He quickly gained a full understanding of a highly complex system and integrated with accuracy its different components into a reliable platform. In particular, he containerized the system’s microservices using Docker and successfully deployed the entire infrastructure on Microsoft Azure. While operating under the strict security and compliance requirements of the European Commission, he devised smart and robust technical solutions to meet these constraints without compromising performance or flexibility.

Thanks to his deep technical expertise combined with strong leadership skills, he took a central place in the team throughout the development and deployment process. He introduced modern collaboration practices in software development by training the team to use Git effectively and implemented a CI/CD pipeline to streamline all code modifications. His initiative and clarity of thought, along with his ability to translate complex concepts into accessible terms, far exceeded our expectations for an intern and made him an indispensable contributor to the project’s success.

It is worthwhile stating that one of his most impressive accomplishments was the solution he brought to the challenge of processing large policy documents within the AI system’s token limitations. Kleon designed a method to segment and process these documents efficiently while maintaining their logical and contextual integrity, an intelligent approach that significantly enhanced the tool’s reliability.

Kleon’s technical achievements, integrity, team spirit and commitment to excellent results left a strong lasting impression on our entire team. It has been a great pleasure to have worked with Kleon, and we warmly recommend him for any future professional endeavors he will choose to pursue.

Sincerely,

Antonis Spinakis
